

OUR RE'S

We would like to chat about how each one of us could play part in reducing plastic pollution from our environment. When plastic is thrown away, it does not just disappear, just because you cannot see it, doesn't mean that is not out there, it is somewhere! We believe that a good starting point is to take RESPONSIBILITY.

We must be responsible for our own plastic taka taka. Each one of us must make sure the plastic doesn't end up in our environment, nor the ocean.

We have come up with our own set of RE's to help us all take RESPONSIBILITY to eradicate plastic taka taka in order to protect our ocean, its marine life and ultimately ourselves.

1. REthink

- Make good decisions when it comes to plastic.
- Think before buying.

2. REfuse

- Say no to plastic straws.
- When you grab some food try to avoid plastic packaging.

3. REmove

- Plastic from the environment
- Cows, goats and chickens won't eat it anymore, and it won't go into the ocean killing fish and turtles.

4. REnew

- Take something old to make something new.

5. REuse

- Think of second uses for all the plastic we buy.

6. REcycle

- If you have to use single-use plastic, you can help the environment and the oceans by responsibly disposing of your waste by recycling it properly.

7. REach out

- Help people understand the importance of conserving our oceans and inform them on all the new information you just learned, leaving a positive impact!

8. REspect

- Finally, do not touch the marine life.
- Do not feed marine life.

REmoving Taka taka from the environment

REusing bottle caps to make fly curtain

REaching out to school children of Zanzibar on plastic pollution
